

NDUKWU TOCHUKWU REX

Junior SOC Analyst / Systems Administration / IAM

rextochi4@gmail.com | linkedin.com/in/ndukwu-rex-476662276 | Lagos, Nigeria (Open to Remote/Relocation)

PROFESSIONAL SUMMARY

Junior SOC Analyst / Systems Administrator / IAM with hands-on experience in endpoint monitoring, threat detection, and incident documentation. Deployed and configured a Wazuh SIEM in a live lab environment, implementing file integrity monitoring, malware detection, and automated threat response via VirusTotal API integration. Proficient in Windows Server, Active Directory, and Linux administration, with practical exposure to identity lifecycle management (JML) and RBAC design. Completed cybersecurity job simulations with Mastercard and Deloitte focused on phishing analysis and incident support. CompTIA Security+ certified; Microsoft AZ-104 in progress (expected Q1 2027).

TECHNICAL SKILLS

- SIEM & Monitoring: Wazuh (deployment, agents, active response rules), log analysis, alert triage, file integrity monitoring
- Security Tools: Virus Total API, Wireshark, Shodan, vulnerability scanning, CVE/CVSS analysis
- Identity & Access: Active Directory (users, groups, GPOs, RBAC), JML lifecycle management, access reviews, least-privilege enforcement
- Operating Systems: Windows Server, Windows Desktop, Linux (command-line administration)
- Networking: TCP/IP, network troubleshooting, connectivity diagnostics, RDP
- Scripting & Automation: PowerShell (account provisioning, offboarding automation)
- Frameworks & Compliance: CIA Triad, Defense-in-Depth, PCI DSS, HIPAA, ISO/IEC 27001

CERTIFICATIONS & TRAINING

- | | |
|--|-----------|
| • CompTIA Security+ | Certified |
| • ISC2 - Certified in Cybersecurity (CC) | 2026 |
| • TCM Security - Practical Help Desk | 2026 |
| • OPSWAT - Critical Infrastructure Protection | 2026 |
| • Cisco - Introduction to Cybersecurity | 2026 |
| • GoMyCode - Certificate of Attendance (Best presentation overall) | |
| • In Progress: Microsoft AZ-104 (expected Q1 2027) | |

PROFESSIONAL EXPERIENCE

Cybersecurity Analyst — Training Program / *GoMyCode* Feb 2026 – Jul 2026

- Monitored and triaged security alerts using Wazuh SIEM to identify potential indicators of compromise, escalating confirmed threats per incident response procedures
- Supported vulnerability management by assisting with scans, reviewing CVSS scores, and helping prioritize remediation based on organizational risk tolerance
- Applied core security principles (CIA triad, defense-in-depth, least privilege) in a hands-on training environment covering threat detection and incident handling workflows

Cybersecurity Job Simulation — Security Awareness *Mastercard (Forage)* Mar 2026

- Served as an analyst on Mastercard's Security Awareness Team, identifying and reporting phishing and social engineering threats
- Assessed business areas for security training gaps and proposed targeted training courses and procedures

Cybersecurity Job Simulation — Incident Support *Deloitte (Forage)* Mar 2026

- Reviewed web activity logs to support a simulated client engagement involving a cybersecurity breach investigation

Customer Service / *Cheroxy Communications* Feb 2022 – Jan 2023

- Provided first-line IT support to end users, troubleshooting hardware, software, and connectivity issues
- Resolved technical inquiries via email and chat, maintaining clear communication with non-technical audiences
- Documented and tracked support tickets, ensuring timely follow-up and resolution in line with service level expectations

PROJECTS (HOME LAB)

SIEM Implementation — *Wazuh, VirusTotal, Linux*

- Deployed and configured Wazuh Manager and agent on a virtual machine for endpoint security monitoring

- Implemented file integrity monitoring (FIM), malware detection, and vulnerability scanning
- Integrated the Virus Total API with Wazuh to enable automated malware analysis and threat intelligence on suspicious files
- Configured active response rules and scan intervals to optimize detection performance

JML (Joiner-Mover-Leaver) Identity Lifecycle Lab — *Windows Active Directory, PowerShell*

- Designed and implemented a full Joiner-Mover-Leaver identity lifecycle process in a Windows AD lab, covering provisioning, role transfers, and deprovisioning across 4 simulated departments
- Built a role-based access control (RBAC) model using AD security groups instead of direct permission grants, reducing entitlement sprawl and enabling faster access audits
- Developed PowerShell scripts to automate account provisioning, group membership changes, and offboarding cutting manual AD admin steps and reducing turnaround time
- Created and executed an access review process to detect and remediate privilege creep from role transfers
- Enforced same-day account deprovisioning on employee exit to close the orphaned-account attack window, aligning with leastprivilege and audit-readiness principles
- Documented the end-to-end IAM lifecycle process with evidence and role matrices, producing a portfolio-ready deliverable

Windows Active Directory Lab — *Windows Server, GPO, RDP*

- Created and managed user and group accounts within a Windows Server Active Directory environment
- Configured and tested Group Policy Objects (GPOs) to enforce security settings and system policies
- Configured GPOs for Logon Hours, USB restrictions, Control panel restrictions
- Used RDP and command-line tools to simulate real-world administration and troubleshooting tasks

Reconnaissance & Vulnerability Assessment — *Shodan*

- Identified open ports and exposed services to assess attack surface for a simulated penetration test
- Performed vulnerability analysis on CVE-2021-41617 (OpenSSH), assessing affected versions, CVSS scoring, and CWE classification
- Mapped penetration testing requirements to compliance frameworks (PCI DSS, HIPAA, ISO/IEC 27001) using real-world scenarios

EDUCATION

- Cybersecurity Security Diploma - GoMyCode, Lagos State, Nigeria
- High School Diploma - FGS, Lagos State, Nigeria
